Cockpit Mobile,

I'm interested in joining the Cockpit Mobile team as a Front End Developer. I'm confident that my experience and skills, along with my drive to do great work, would help me create solutions with Cockpit Mobile. I would love to talk with your team to dive further into the ways I could contribute as a team member.

About me
I currently work at Epic, where I'm an Integration Engineer. I'm responsible for learning the workflows of end users at hospitals, learning how Epic and 3rd party software systems will fit into those workflows, and then finding ways to send and receive specific data between 3rd party systems and Epic at the proper points in those workflows. Through working at Epic, I've sharpened my ability to problem solve while collaborating with key stakeholders to implement a technical solution. Outside of Epic, for the last 10 months I've been working on creating my own app involving machine learning and computer vision.

Before working at Epic, I gained experience in financial modeling and hedging through an internship at Allianz Life Insurance. In college, I pursued my passion for operations and efficiency by studying Industrial and Operations Engineering at the University of Michigan.

How I'll fit in at Cockpit
I believe my experiences at Epic and in my own endeavors would allow me to work effectively with Cockpit Mobile and its clients to create solutions that make clients happy. I love envisioning a product or solution and finding a way to get there.

Again, I would be thrilled to talk with your team, learn about some of the goals that you currently have, and discuss where I could contribute as a team member to achieving those goals.

I look forward to hearing from you within the near future. I can be reached at (612) 889-7373, or via email at jwjasper@umich.edu. Thank you for your consideration in my candidacy.

Sincerely,

Jack Jasper
